

SOP: New Blog Content (Airtable-Generated)

Purpose

Publish search-aligned blog content efficiently using Airtable automation as the drafting engine, with light human validation before publishing.

Scope

Applies to **all new blog articles** generated by the Airtable system, including standard SEO blogs and vlog-based articles.

Process

1. Automation Draft (Required)

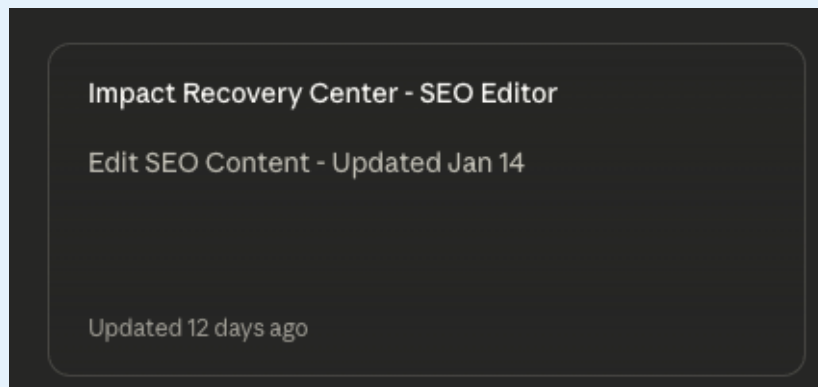

- Article is **fully drafted in Airtable** by automation:
 - Intro
 - Headers
 - Body copy
 - FAQ (if applicable)
 - CTA
 - Meta title
 - meta description
-  No manual outlining
-  No writing from scratch outside Airtable

2. Human Review & Research

- Review structure to ensure it covers everything the top 3 results in the SERP for that Keyword cover (reference the SERP in Ahrefs Keyword Overview)
- Fact-check key claims
- Add Links
 - Add **1–2 supporting external links** where appropriate
 - Prefer government or peer-reviewed sources when relevant (no direct competitors)
 - The Claude project for each client can do this too
 - Ensure there are 3+ internal links
 - The first link on the page (within the first 300 words) should be towards a service page that the blog supports in inline anchor text.
 - You can use the Claude project for this client to help with adding in the internal links (it has programming to add these in already)
 - Add a link to the verify insurance page in the conclusion

Use the client's SEO Content Editor Project in Claude to add internal links, structure, and fact check your document before posting. The SEO Editor will have a line like "Edit SEO Content" and a "Updated on date" in the description. It's powered by our [Claude System message](#) to do best-yet content editing

3. Create Draft in Wordpress

1. Paste content into WordPress
2. Add a featured image
 - Use target keyword in alt text
3. ensure these are set & correct:
 - a. slug (from AT)
 - b. meta title (from AT)
 - c. meta description (from AT)
 - d. author
 - e. category (if applicable)
4. Ensure a CTA exists above the fold
5. Heading structure makes sense and is formatted correctly
6. All links resolve correctly
7. Publish!

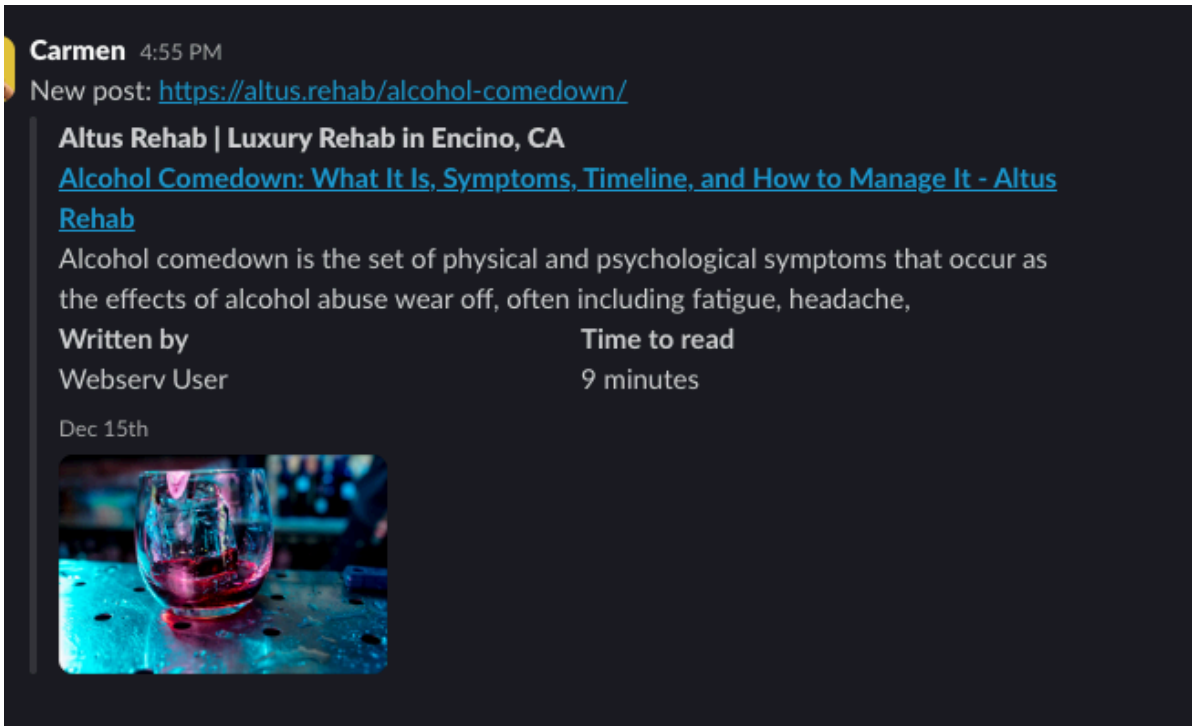

4. Post-Publish

☐ Add links to this new article from 3 relevant blog posts using internal linking best practices

- Good Example:
If you're struggling with persistent anxiety symptoms, our **anxiety treatment for adults** program focuses on evidence-based therapy options tailored to long-term relief.
- Generic example:
Learn more about anxiety **here**.

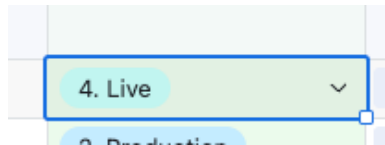

5. Finalize & Log

- Post the live URL in the client's slack channel.
 - Example:

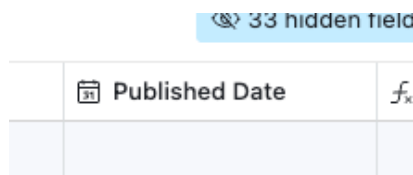

- Return to Airtable and for that record:

☐ Update Status to Live

☐ Update Published Date to today's date

☐ Remove Due date (delete it)
