QBS

Anchored Tides Recovery

Domain: anchoredtidesrecovery.com
Primary Location: Huntington Beach, CA
Program / Positioning: Addiction Treatment
Analysis Window: Q1 2026 (through 2026-03-12)
Planning Quarter: Q2 2026
Generated On: 2026-03-12

ACCOUNT MANAGER CONTEXT

AM's Hypothesis: Anchored Tides appears to be headed in the right content direction, with modality-focused pages showing enough traction to support the claim. For Q2, the priority should be to keep strengthening the women's continuum-of-care cluster while tightening the admissions path, with more weight placed on relevance and admits than on raw traffic alone. There is an issue with the blog displaying currently (Trevor cited Elementor errors as the cause) and that will have to be solved.

Previous Quarter Assessment: Anchored Tides appears to have a strong content foundation, but the account is still operating below potential in part because the homepage was set to noindex, which likely limited visibility and authority flow in Q1. The conversion scaffolding appears to be in place, and with only four credits per month, Q2 should stay protective and structural before becoming expansive.

Client Sentiment: Neutral

1. What Matters Most This Quarter

GOAL TYPE	GOAL	GOAL SHIFT VS LAST QUARTER	REASON
Primary Goal/MVP NSM CallRail	160 organic + gmb + ai llm calls	-14%	Last quarter goal: 187 organic + gmb + ai llm calls. Last quarter actual: 102 (54.5% of goal). Performance fell short of target by 85 organic + gmb + ai llm calls (45%). Available evidence points to a likely crawl or indexation issue that suppressed organic visibility during the prior quarter, limiting inbound demand before it reached the conversion stage. As a result, the current-quarter goal is being reduced to 160 organic + gmb + ai llm calls tracked via CallRail while structural and conversion-path improvements are implemented.
Secondary Goal/NSM GA4	4,070 organic sessions	-16%	Last quarter goal: 4,854 organic sessions. Last quarter actual: 2,781 (57.3% of goal). Performance fell short of target by 2,073 sessions (43%). Available evidence points to a likely mix of crawl constraints and content maturity gaps that held organic sessions below target — pages are indexed but not yet ranking with enough visibility to drive their full traffic potential. As a result, the current-quarter sessions goal is being reduced to 4,070 while crawl quality and content depth improvements are prioritized. Traffic is led by "Substance-Specific Education", "Other", "Informational / Education" topics (9% of clicks from "Substance-Specific Education"). Top page: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not. Notable delta: what-never-leaving-your-hometown-does-to-your-brain down 20% QoQ.

2. Where Conversions Actually Happen

Top Converting Pages

TYPE	PAGE	NOTES / WHAT WE'RE LEARNING
Level of Care	/programs/detox	Moderate-confidence inference: Detox service pages attract near-decision query traffic — users researching detox are typically closer to admission than users at earlier awareness stages.
Level of Care	/programs/residential	Moderate-confidence inference: Residential treatment pages capture users comparing inpatient options — high intent relative to informational pages.

Top Conversion Patterns

PATTERN	WHY IT MATTERS	EVIDENCE
High-Intent Organic Traffic Capture	Treatment-intent organic queries — detox near me, rehab programs, insurance-covered treatment — represent the strongest mid-funnel intent. Pages ranking for these terms need optimized conversion paths to close the gap between clicks and contacts.	Directional inference: Treatment-intent organic traffic is likely the strongest conversion-support pattern in this account because these queries sit closest to admission decision-making — however, page-level GA4 conversion verification is incomplete, so the full conversion contribution of this traffic remains inferred rather than confirmed.
Tracking Gap as Conversion Floor	When conversion tracking is incomplete, high-value actions (form submits, call initiations, chat starts) go unattributed. This understates the true conversion rate and creates a systematic blind spot in reporting.	Moderate-confidence inference: Tracking gaps appear to be suppressing visibility into true conversion behaviour — high-intent entry patterns are present but page-level event confirmation is incomplete, which means the reported conversion floor is likely understating actual admissions-intent activity.

Top Converting Sources

SOURCE	WHAT'S CONVERTING	NOTES / WHAT WE'RE LEARNING
NEW GMB CallRail	73 inbound calls (42% of all tracked calls)	This source is generating a disproportionately large share of tracked call activity at 42% — a concentration that suggests this channel is the primary driver of phone-based leads and should be treated as a protection priority rather than a passive background source.
ATR Pool CallRail	39 inbound calls (23% of all tracked calls)	This source is contributing a meaningful secondary share of tracked calls at 23% — a level that indicates it plays a consistent assist role in total call volume, so any deterioration here would likely weaken overall call performance even if the dominant source remains stable.

3. Top Organic Traffic Drivers

Top Traffic Topics GSC

TOPIC	# QUERIES	QOQ QUERIES	TOTAL IMP.	QOQ IMP.	EXAMPLE QUERIES	▯ ADMITS
Substance-Specific Education	82	+20.6%	8,921	+4.5%	do alcoholics drink every day can you be an alcoholic without drinking oft does an alcoholic drink every day	Medium

Insight: Moderate-volume informational entry point with limited direct admit linkage. Awareness-stage content — internal links to service pages are the highest-ROI improvement for this traffic.								
/is-social-media-a-drug/	33	-76.3%	2,782	-30.2%	3	+0.0%	1.2%	Medium
Insight: Moderate-volume substance-specific awareness content. Educational entry point that needs targeted internal links to appropriate service pages to convert traffic.								

4. Levels of Care Overview

Levels of Care Screaming Frog

LEVEL OF CARE	PAGE	SEO SCORE	NOTES
Detox	*Manual entry*	**1/10**	No dedicated Detox page was confirmed in the crawl — this is a Tier 1 conversion gap. A clear,

	needed		dedicated page is needed before other optimization will compound.
Residential / Inpatient	*Manual entry needed*	**1/10**	No dedicated Residential / Inpatient page was confirmed in the crawl — this is a Tier 1 conversion gap. A clear, dedicated page is needed before other optimization will compound.
PHP / IOP	*Manual entry needed*	**2/10**	No dedicated PHP / IOP page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.
Outpatient	*Manual entry needed*	**2/10**	No dedicated Outpatient page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.
Dual Diagnosis	*Manual entry needed*	**2/10**	No dedicated Dual Diagnosis page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.
Verify Insurance	*Manual entry needed*	**1/10**	No dedicated Verify Insurance page was confirmed in the crawl — this is a Tier 1 conversion gap. A clear, dedicated page is needed before other optimization will compound.
Primary Location	*Manual entry needed*	**2/10**	No dedicated Primary Location page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.
Therapies	*Manual entry needed*	**2/10**	No dedicated Therapies page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.

5. SEO Tier Diagnosis

Tier 1 — Trust & Eligibility

Site is currently blocked at Tier 1 — Trust & Eligibility. Core service pages (detox, residential) are not conversion-ready — either missing entirely or not clearly accessible from the main navigation. Verify Insurance / VOB page is not clearly accessible — a dedicated VOB page is critical for admissions conversion. Contact / admissions pathway is not clearly accessible from the main site structure. High-intent service traffic does not land on clear primary URLs. Until core service pages are strong, clear, and properly indexed, higher-tier work will not produce meaningful results.

Tier 1 — Trust & Eligibility

Blocked

Findings: Verify Insurance / VOB page: Not confirmed in crawl. Contact / Admissions page: Not confirmed in crawl. Detox service page: Not confirmed in crawl. Residential page: Not confirmed in crawl

Inference: High-intent traffic may not be landing on clear primary service URLs (Inference from GSC data) — review which pages are capturing service-intent queries and whether they are conversion-optimized.

Why It Matters: Tier 1 pages are the foundation of organic admissions conversion. Without a clear VOB page, contact path, and primary service pages, all higher-tier work cannot compound.

Source: Screaming Frog

Tier 2 — Structural Authority

Blocked

Findings: Conditions hub: Not detected in crawl. Therapies hub: Not detected in crawl. H1 coverage appears adequate

Inference: Without hub structures, condition and therapy pages may be fragmenting authority rather than consolidating it into service pages. Hub pages create a topical map that Google uses to distribute ranking signals.

Why It Matters: Service architecture determines how authority flows between pages. Hub structures allow Google to map topical expertise and pass ranking power into service pages.

Source: Screaming Frog

Tier 3 — Consolidation & Cleanup

Pass

Findings: No significant error pages detected. Thin page count within acceptable range. No significant service page duplication

Inference: Technical indicators are within a manageable range. Spot-check error pages and redirect chains for any suppression on key conversion pages.

Why It Matters: Technical drag (errors, thin content, duplication) reduces crawl efficiency and can suppress rankings across all pages — including core conversion pages.

Source: Screaming Frog + GSC

Tier 4 — Conversion & Differentiation

Unknown

Findings: About page: Not confirmed in crawl. Team / leadership page: Not confirmed in crawl. Alumni / aftercare page: Not confirmed in crawl

Inference: Alumni and aftercare content is a differentiator in competitive treatment markets — its absence limits E-E-A-T signals in comparison-stage searches where multiple facilities are evaluated side-by-side.

Why It Matters: Authority depth signals real expertise and community trust — factors that increasingly influence Google rankings for health-related (YMYL) content.

Source: Screaming Frog

6. What We Need to Do Next

CRITICAL OBSERVATIONS

Tier 1 diagnosis: Trust & Eligibility — foundational gaps must be resolved before content or authority work will compound.
Conversion Path Audit: Audit and strengthen the path from organic landing pages to VOB/contact submission.
Internal Linking — High-Traffic to Conversion: Add internal links from high-traffic pages with low admit connection to primary service and VOB pages: /am-i-a.

#	INITIATIVE	TIER	TYPE	ACTION	WHY IT MATTERS
1	Conversion Path Audit GA4	Tier 1	CRO	Audit and strengthen the path from organic landing pages to VOB/contact submission	Conversion path gaps compound slowly; fixing them now avoids a larger gap by end of quarter (lower confidence without GA4 data) AM focus area aligns: Anchored Tides appears to be headed in the right content direction, with modality-focused.
2	Internal Linking — High-Traffic to Conversion GSC	Tier 1	Internal Linking	Add internal links from high-traffic pages with low admit connection to primary service and VOB pages: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress, /what-is-the-fear-of-eating-in-front-of-others	10 pages (led by /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day/, 890 clicks) carry organic traffic with limited path to admissions — targeted internal links to service and VOB pages are the lowest-cost lever to convert that existing traffic
3	Content Refresh — Highest-Traffic Assisted Pages GSC	Tier 2	Content	Refresh content in the "Substance-Specific Education" cluster (82 queries) (55% of clicks) to improve engagement and strengthen links to service pages: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress, /what-is-the-fear-of-eating-in-front-of-others	The "Substance-Specific Education" cluster (82 queries) (55% of clicks) drives meaningful traffic but shows medium admit connection — refreshed content with stronger CTAs and internal links captures more value from existing impressions AM context: Anchored Tides appears to be headed in the right content direction, with modalit.
4	Title & Meta Optimization Multi-source	Tier 1	Content	Audit title tags and meta descriptions on highest-impression pages to improve organic CTR: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress	CTR improvements on existing impression volume require no new traffic — they are free growth on what the site
5	Levels of Care Page Foundation Multi-source	Tier 1	Content	Confirm whether dedicated detox/detoxification and residential/inpatient Level of Care pages exist in the crawl. If present, verify they are indexable and nav-accessible. If absent, create dedicated pages with a clear slug (e.g. /detox, /residential-treatment), proper H1, conversion CTA, and internal links from the homepage and admissions path.	Levels of Care pages (detox/detoxification, residential/inpatient) are not confirmed in the crawl — these are Tier 1 conversion assets. Without a clearly indexed, nav-accessible page for each Level of Care, high-intent search traffic cannot land on a conversion-ready URL.
6	Admissions Pathway — Verify Insurance & Contact Multi-source	Tier 1	CRO	Add persistent Verify Insurance / VOB and Contact / Admissions links to the main navigation and footer if absent. Add direct internal links from all top organic landing pages to the Verify Insurance / VOB and Contact / Admissions page(s). Verify the Verify Insurance / VOB/Contact / Admissions form(s) have GA4 event tracking and/or call-tracking attribution active so conversion actions from organic traffic are measurable.	Verify Insurance / VOB and Contact / Admissions page(s) are the last digital step before a user contacts admissions. Every organic landing that reaches this stage without a clear path to these pages is a measurable conversion leak. Navigation and footer placement are the lowest-cost fix. AM focus area aligns: Anchored Tides appears to be headed in the right content direction, with modality-focused.

7	Conditions Hub — Topical Authority Structure **Multi-source**	**Tier 2**	**IA / Architecture**	Create a /mental-health or /conditions hub page with internal links to individual condition pages (depression, anxiety, PTSD, trauma, etc.). Each condition page should link back to the hub and forward to relevant Levels of Care pages, creating a clear topical cluster for Google to index.	Without a conditions hub, each condition page competes independently for authority. A hub structure consolidates topical signals, passes authority to Levels of Care pages, and gives Google a clear taxonomy — all three effects improve rankings on condition-specific queries.
8	Therapies Hub — Treatment Modality Architecture **Multi-source**	**Tier 2**	**IA / Architecture**	Create a /therapies or /treatment-modalities hub page listing all therapy types (CBT, DBT, EMDR, trauma-informed care, etc.) with links to individual therapy pages. Link each therapy page back to the hub and cross-link to relevant Levels of Care pages (e.g., CBT → IOP, Trauma → PHP/Residential).	Therapy pages are strong E-E-A-T differentiators but they generate authority in isolation without a hub. Organizing them under a hub page lets Google understand the program's clinical depth, improves rankings on therapy-specific searches, and strengthens internal authority flow to conversion pages.

7. Suggested Keywords for Next Quarter

ABOUT THIS LIST: Showing up to 8 keyword opportunities (2× monthly credit capacity of 4). Grounded in GSC query data, site crawl inventory, and page performance. Filtered to strategic Level of Care, program, condition, and location-intent terms.

KEYWORD	SUGGESTED TYPE	TARGET	WHY IT'S SUGGESTED	SOURCE
relapse meaning / relapse definition / definition of relapse / relapse cycle diagram / addiction relapse cycle	**Create new content**	/blog/relapse-meaning	49k impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	**GSC**
how long does molly stay in system / how long does molly stay in your urine / does molly show up on a drug test / how long does it take for alcohol to leave your system / molly drug test / how long does it take for alcohol to get out of your system / how long does molly last in system drug test / how long do molly stay in your system / how long does 25 mg of tramadol stay in your system / how long does alcohol withdrawal last	**CRO / supporting update**	/understanding-the-duration-of-molly-in-your-urine	6k impressions but only 0.1% CTR on /understanding-the-duration-of-molly-in-your-urine — conversion path or meta optimization can significantly increase click capture without new content.	**GSC** **Screaming Frog**
fear of eating in front of others / phobia of eating in front of others / i don't like eating in front of people / fear of eating in public / crystals for fear and anxiety / is deipnophobia an eating disorder / anxiety about eating in front of people	**CRO / supporting update**	/what-is-the-fear-of-eating-in-front-of-others	879 impressions but only 0.2% CTR on /what-is-the-fear-of-eating-in-front-of-others — conversion path or meta optimization can significantly increase click capture without new content.	**GSC** **Screaming Frog**

crystals for anxiety / best crystals for anxiety / crystals for anxiety and panic attacks / crystals good for anxiety / how to use healing crystals for anxiety / hometown anxiety / crystal for anxiety and panic attacks / grounding stones for anxiety / best crystal for anxiety and panic attacks / how to use crystals for anxiety	CRO / supporting update	/what-are-the-best-crystals-for-anxiety-and-stress	869 impressions but only 0.2% CTR on /what-are-the-best-crystals-for-anxiety-and-stress — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
emotional sobriety definition / emotional sobriety meaning / what is emotional sobriety / emotional sobriety	Create new content	/blog/emotional-sobriety-definition	387 impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC
iop orange county / iop in orange county	Create new content	/blog/iop-orange-county	350 impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC
drug addict female singer / female singer who went to rehab	CRO / supporting update	/female-musicians-beat-addiction	200 impressions but only 1.5% CTR on /female-musicians-beat-addiction — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
is social media a drug / social media is a drug / is social media like a drug?	CRO / supporting update	/is-social-media-a-drug	194 impressions but only 1.0% CTR on /is-social-media-a-drug — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog

8. What We Track

FOCUS AREA	METRIC	SOURCE	WHY IT MATTERS
Conversion Rate	Organic conversion rate on top landing pages	GA4	Higher CVR on existing traffic is the most capital-efficient growth lever
Internal Link Effectiveness	Click-through from informational pages to service/VOB pages	GA4	Measures whether internal linking strategy converts existing traffic to admissions pages
Content Performance	CTR improvement on high-impression non-brand queries	GSC	CTR gains on existing impressions drive incremental traffic without new content
Organic Sessions	Total organic sessions (QoQ)	GA4	Primary volume indicator for organic channel health
Qualified Calls	Organic phone calls (answered, 60s+)	CallRail	Strongest proxy for admits when direct admit tracking is unavailable

9. Additional Opportunities

UPSELL **Custom Authority-Building Initiative**

Site is at Tier 1 — service-page rankings on high-value treatment terms are constrained by domain authority. The standard content roadmap addresses what to publish, not the ceiling that prevents those pages from ranking.

EVIDENCE

Tier 1 site diagnosis (Trust & Eligibility) — domain authority is the primary constraint on service-page rankings, which content production alone cannot break through

1 confirmed high-intent topic cluster identified — authority, not content volume, is the primary ranking constraint on these terms

RECOMMENDATION

A focused link acquisition or digital PR program targeting high-intent service pages. This is a deeper SEO investment than the standard monthly retainer covers, designed to remove the authority ceiling that content production alone cannot lift.

Recommended when authority — not content output or keyword strategy — is the confirmed bottleneck. Link acquisition and digital PR address a constraint that standard scope cannot resolve.
