

Content & SEO Mid-Strategy Check-in

Bliss Recovery

Building durable organic performance with purpose.

Date: Mar 12, 2026

Prepared by: Olivia Birkbeck & Jay Hall

Mid-Strategy Month Review

What's in this deck

- Competitive Benchmarking
- First Core Focus: Structural Cleanup for the Bliss navigation menu
- What's next

Our Next Checkpoint

Launch Strategy & Roadmap Review - Date TBD (2 weeks from now)

- Finalizes goals, North Star Metrics, and success benchmarks
- Aligns on the execution plan across content, SEO, and site improvements
- Confirms launch-ready priorities for the next phase
- Signals the transition from planning → active execution

BLISS RECOVERY: COMPETITIVE ANALYSIS BASELINE

Where you stand vs. everybody else

You have the strongest authority in the competitive set, but it isn't fully deployed.

Bliss carries the most backlink credibility in the group, yet the site has relatively few pages compared to competitors.

As a result, the site has limited entry points for Google to rank across treatment and admissions-related searches.

Our Opportunity:

Expand targeted Programs, Conditions, and Demand Generation content to convert existing authority into significantly more search visibility.

BLISS RECOVERY: COMPETITIVE ANALYSIS BASELINE

Where you stand vs. everybody else

You're generating pages, but they aren't yet translating into strong keyword ownership.

Some competitors convert a relatively small number of pages into large volumes of Top 10 rankings, showing their content is highly aligned with high-value search terms.

Bliss currently has limited Top 10 keyword presence, which means **the existing content isn't yet capturing the most competitive or high-intent searches.**

Our Opportunity:

Focus new and existing pages around high-intent treatment, condition, and demand generation keywords so each page is built to capture engagement, not just add volume.

BLISS RECOVERY: COMPETITIVE ANALYSIS BASELINE

Where you stand vs. everybody else

Your competitors are appearing in AI answers more often than you are.

Several competitors have strong AI visibility and citation rates, meaning their content is being referenced frequently in AI-generated answers and search features.

Bliss currently has low mention rates and limited snippet presence, which reduces its exposure in both AI-driven results and traditional SERP features.

Our Opportunity:

Structure key pages with clear answers, definitions, and treatment explanations to increase citations in AI results and win more featured snippets.

BLISS RECOVERY: COMPETITIVE ANALYSIS BASELINE

Where you stand vs. everybody else

Across all key metrics: authority, visibility, and AI readiness, Bliss Recovery currently ranks at the bottom of the pack, giving us a clear benchmark for where to close the gap.

Bliss Recovery Competitive Position: 10th percentile

The data shows our fastest growth levers are trust, and content depth.

Not just more pages, but smarter ones that earn visibility and trust across both traditional and AI search.

Homepage Drives 88% of Organic Clicks

- **Homepage drives 642 of 730 total clicks (88%),** indicating organic traffic is heavily driven by branded searches.
Insight: Organic visibility is concentrated on brand demand rather than non-brand discovery.
- **All other page types combined generate only ~12% of clicks,** despite representing 79 of the site's 80 pages.
Insight: Most site content is not currently capturing meaningful organic visibility.
- **Blog posts contribute just 1% of clicks across 37 pages,** suggesting individual articles are not ranking or capturing search demand.
Insight: Informational content represents a clear opportunity to grow non-brand traffic.

Share of Google Clicks by Page Category

A Small Set of Pages Drives a Large Share of All Sessions

- **Care access pages generate 23% of sessions** from only 3 pages (131 sessions/page).
Insight: High-intent contact/verify insurance pages perform strongly and appear to capture users wanting to get in touch.
- **Blog content accounts for 27% of sessions, but most traffic is concentrated on the /blog index page** rather than individual posts.
Insight: Individual blog articles currently capture very little organic visibility, suggesting an opportunity to improve how informational content ranks and attracts non-brand searches.
- **Condition and modality pages contribute ~19% of sessions combined.**
Insight: These pages represent important mid-funnel opportunities to capture condition and treatment-related searches and guide users toward care access pages.

Share of Sessions by Page Category

FIRST PRIOS

Your SEO growth depends on building the missing middle of the funnel.

1. Build the Middle of the Funnel (Conditions → Programs → Admissions)

Right now the site jumps from **brand search** → **homepage**, with very little supporting content guiding users toward treatment. Expanding **condition and program pages that lead into care access** will create the funnel Google expects for treatment searches.

2. Turn the Blog Into a Discovery Engine

Bliss already has one of the **strongest domain authorities in the competitive set**, which means new content has a higher chance of ranking quickly. By rebuilding the blog around informational searches tied to conditions, symptoms, and treatment questions, Bliss can use that authority to capture non-brand discovery traffic and guide users into condition and admissions pages.

3. Structure Content to Win AI & SERP Visibility

Competitors are appearing more in **AI answers and search features**. Key pages should be structured with **clear definitions, FAQs, and direct answers** so Bliss can earn citations, snippets, and AI visibility.

Our goal: improve both usability and search performance.

The new IA moves up the most important parts of your site to the top level (Programs / What We Treat / Admissions). These map to real searches and support stronger internal linking—helping key pages rank, earn snippets, and convert. New buttons to highlight Verify insurance and a font change for legibility are also recommended.

Current:

Future:

A scalable blueprint for what we publish next.

We'll build out Bliss's top-level hubs in the order that best supports rankings, internal linking, and admissions—starting with Programs, What We Treat, and Admissions, then expanding trust-supporting content in About and Resources.

About + Resources are the credibility layer.

About consolidates core E-E-A-T signals—team, standards, accreditation, and outcomes—so trust is easy to verify. Resources extends that authority through helpful, structured content (blog, FAQs, continuing education, media coverage) that answers real questions and supports search visibility over time.

What's Next:

Webserv:

1. **Continued content and technical remediation planning:** We're doing keyword research and evaluating your pages to figure out how to tackle our top priorities within your current scope.
2. **Local SEO & visibility foundations:** As we move beyond initial cleanup and core service work, we'll also begin laying the groundwork for local SEO initiatives, including location relevance, GBP optimization, and supporting infrastructure.

Bliss Team:

3. **Confirm the proposed long-term site structure:** Ensure this organization reflects how you want Bliss' services and offerings to be understood over time.
