QBS

Anchored Tides Recovery

Domain: anchoredtidesrecovery.com

Primary Location: Huntington Beach, CA

Program / Positioning: Addiction Treatment

Analysis Window: Q1 2026 (through 2026-03-12)

Planning Quarter: Q2 2026

Generated On: 2026-03-12

ACCOUNT MANAGER CONTEXT

AM's Hypothesis: Anchored Tides appears to be headed in the right content direction, with modality-focused pages showing enough traction to support the claim. For Q2, the priority should be to keep strengthening the women's continuum-of-care cluster while tightening the admissions path, with more weight placed on relevance and admits than on raw traffic alone. There is an issue with the blog displaying currently (Trevor cited Elementor errors as the cause) and that will have to be solved.

Client Sentiment: Neutral

1. What Matters Most This Quarter

GOAL TYPE	GOAL	GOAL SHIFT VS LAST QUARTER	REASON
Primary Goal/MVP NSM CallRail	160 organic + gmb + ai llm calls	-14%	Last quarter goal: 187 organic + gmb + ai llm calls. Last quarter actual: 102 (54.5% of goal). Performance fell short of target by 85 organic + gmb + ai llm calls (45%). Available evidence points to a likely crawl or indexation issue that suppressed organic visibility during the prior quarter, limiting inbound demand before it reached the conversion stage. As a result, the current-quarter goal is being reduced to 160 organic + gmb + ai llm calls tracked via CallRail while structural and conversion-path improvements are implemented.
Secondary Goal/NSM GA4	4,070 organic sessions	-16%	Last quarter goal: 4,854 organic sessions. Last quarter actual: 2,781 (57.3% of goal). Performance fell short of target by 2,073 sessions (43%). Available evidence points to a likely mix of crawl constraints and content maturity gaps that held organic sessions below target — pages are indexed but not yet ranking with enough visibility to drive their full traffic potential. As a result, the current-quarter sessions goal is being reduced to 4,070 while crawl quality and content depth improvements are prioritized. Traffic is led by "Substance-Specific Education", "Other", "Informational / Education" topics (9% of clicks from "Substance-Specific Education"). Top page: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not. Notable delta: what-never-leaving-your-hometown-does-to-your-brain down 20% QoQ.

2. Where Conversions Actually Happen

Top Converting Pages

TYPE	PAGE	NOTES / WHAT WE'RE LEARNING
Contact / Admissions	`/contact-us/`	High-confidence inference: Contact and admissions pages are near-certain conversion-support URLs for treatment centers — they are the primary destination for users actively seeking intake information.
Verify Insurance	`/admissions-and-alcohol-rehab-insurance/`	High-confidence inference: Admissions pages sit at the bottom of the conversion funnel — users reaching this page have moved past evaluation and are initiating the intake process.

Top Conversion Patterns

PATTERN	WHY IT MATTERS	EVIDENCE
High-Intent Organic Traffic Capture	Treatment-intent organic queries — detox near me, rehab programs, insurance-covered treatment — represent the strongest mid-funnel intent. Pages ranking for these terms need optimized conversion paths to close the gap between clicks and contacts.	Directional inference: Treatment-intent organic traffic is likely the strongest conversion-support pattern in this account because these queries sit closest to admission decision-making — however, page-level GA4 conversion verification is incomplete, so the full conversion contribution of this traffic remains inferred rather than confirmed.
Tracking Gap as Conversion Floor	When conversion tracking is incomplete, high-value actions (form submits, call initiations, chat starts) go unattributed. This understates the true conversion rate and creates a systematic blind spot in reporting.	Moderate-confidence inference: Tracking gaps appear to be suppressing visibility into true conversion behaviour — high-intent entry patterns are present but page-level event confirmation is incomplete, which means the reported conversion floor is likely understating actual admissions-intent activity.

Top Converting Sources

SOURCE	WHAT'S CONVERTING	NOTES / WHAT WE'RE LEARNING
NEW GMB **CallRail**	73 inbound calls (42% of all tracked calls)	This source is generating a disproportionately large share of tracked call activity at 42% — a concentration that suggests this channel is the primary driver of phone-based leads and should be treated as a protection priority rather than a passive background source.
ATR Pool **CallRail**	39 inbound calls (23% of all tracked calls)	This source is contributing a meaningful secondary share of tracked calls at 23% — a level that indicates it plays a consistent assist role in total call volume, so any deterioration here would likely weaken overall call performance even if the dominant source remains stable.

3. Top Organic Traffic Drivers

Top Traffic Topics **GSC**

TOPIC	# QUERIES	QOQ QUERIES	TOTAL IMP.	QOQ IMP.	EXAMPLE QUERIES	▯ ADMITS
Substance-Specific Education	82	+20.6%	8,921	+4.5%	do alcoholics drink every day can you be an alcoholic without drinking oft does an alcoholic drink every day	Medium

Insight: Moderate-volume substance-specific awareness content. Educational entry point that needs targeted internal links to appropriate Levels of Care pages to convert traffic.								
/understanding-the-duration-of-molly-in-your-urine/	34	-35.8%	25,518	-44.2%	3	-25.0%	0.1 %	Low
Insight: Moderate-volume informational entry point with limited direct admit linkage. Awareness-stage content — internal links to Levels of Care pages are the highest-ROI improvement for this traffic.								
/is-social-media-a-drug/	33	-76.3%	2,782	-30.2%	3	+0.0%	1.2 %	Medium

Insight: Moderate-volume substance-specific awareness content. Educational entry point that needs targeted internal links to appropriate Levels of Care pages to convert traffic.

4. Levels of Care Overview

Levels of Care SF

LEVEL OF CARE	PAGE	SEO SCORE	NOTES
Contact / Admissions	`/contact-us/`	6/10	URL structure is reasonable (/contact-us/). Inference: Content depth, CTA placement, and internal linking to this page should be verified before claiming full conversion readiness.
Detox	`/womens-addiction-treatment-center/detoxification`	6/10	URL structure is reasonable (/womens-addiction-treatment-center/detoxification). Inference: Content depth, CTA placement, and internal linking to this page should be verified before claiming full conversion readiness.
Residential / Inpatient	*Manual entry needed*	1/10	No dedicated Residential / Inpatient page was confirmed in the crawl — this is a Tier 1 conversion gap. A clear, dedicated page is needed before other optimization will compound.
PHP / IOP	`/womens-addiction-treatment-center/womens-intensive-outpatient-orange-county`	6/10	URL structure is reasonable (/womens-addiction-treatment-center/womens-intensive-outpatient-orange-county). Inference: Content quality and internal linking effectiveness need manual review to confirm above-baseline performance.
Outpatient	`/womens-addiction-treatment-center/outpatient-treatment-in-orange-county`	6/10	URL structure is reasonable (/womens-addiction-treatment-center/outpatient-treatment-in-orange-county). Inference: Content quality and internal linking effectiveness need manual review to confirm above-baseline performance.
Dual Diagnosis	`/womens-addiction-treatment-center/dual-diagnosis`	6/10	URL structure is reasonable (/womens-addiction-treatment-center/dual-diagnosis). Inference: Content quality and internal linking effectiveness need manual review to confirm above-baseline performance.
Verify Insurance	`/admissions-and-alcohol-rehab-insurance`	6/10	URL structure is reasonable (/admissions-and-alcohol-rehab-insurance). Inference: Content depth, CTA placement, and internal linking to this page should be verified before claiming full conversion readiness.
Primary Location	`/womens-addiction-treatment-center`	7/10	URL structure is reasonable (/womens-addiction-treatment-center). Inference: Content quality and internal linking effectiveness need manual review to confirm above-baseline performance.

5. SEO Tier Diagnosis

Tier 1 — Trust & Eligibility

Site is partially cleared at Tier 1 — Trust & Eligibility. Most core Levels of Care pages are confirmed present, but gaps remain: High-intent Levels of Care traffic does not land on clear primary Levels of Care page URLs. Closing these remaining gaps will complete Tier 1 and allow authority-building work to compound.

Tier 1 — Trust & Eligibility

Partial

Findings: Verify Insurance / VOB page: Confirmed present — not found in main navigation or footer (Inference: may be accessible only via internal links or direct URL). Contact / Admissions page: Confirmed present — linked from main navigation (Fact). Detox Levels of Care page: Confirmed present. Residential / Inpatient Level of Care page: Not confirmed — no dedicated Residential / Inpatient page found at standard paths; verify with AM and provide URL

Inference: High-intent traffic may not be landing on clear primary Levels of Care page URLs (Inference from GSC data) — review which pages are capturing Levels of Care intent queries and whether they are conversion-optimized.

Why It Matters: Tier 1 pages are the foundation of organic admissions conversion. Without a clear VOB page, contact path, and primary Levels of Care pages, all higher-tier work cannot compound.

Source: SF

Tier 2 — Structural Authority

Blocked

Findings: Conditions hub: Not detected in crawl. Therapies hub: Not detected in crawl. H1 coverage appears adequate

Inference: Without hub structures, condition and therapy pages may be fragmenting authority rather than consolidating it into Levels of Care pages. Hub pages create a topical map that Google uses to distribute ranking signals.

Why It Matters: Site architecture determines how authority flows between pages. Hub structures allow Google to map topical expertise and consolidate ranking power into Levels of Care pages.

Source: SF

Tier 3 — Consolidation & Cleanup

Pass

Findings: No significant error pages detected. Thin page count within acceptable range. No significant Levels of Care page duplication

Inference: Technical indicators are within a manageable range. Spot-check error pages and redirect chains for any suppression on key conversion pages.

Why It Matters: Technical drag (errors, thin content, duplication) reduces crawl efficiency and can suppress rankings across all pages — including core conversion pages.

Source: SF + GSC

Tier 4 — Conversion & Differentiation

Partial

Findings: About page: Present. Team / leadership page: Present. Alumni / aftercare page: Not confirmed in crawl

Inference: Alumni and aftercare content is a differentiator in competitive treatment markets — its absence limits E-E-A-T signals in comparison-stage searches where multiple facilities are evaluated side-by-side.

Why It Matters: Authority depth signals real expertise and community trust — factors that increasingly influence Google rankings for health-related (YMYL) content.

Source: SF

6. What We Need to Do Next

CRITICAL OBSERVATIONS

Tier 1 diagnosis: Trust & Eligibility — foundational gaps must be resolved before content or authority work will compound.
Conversion Path Audit: Audit internal-link paths from top organic landing pages to Verify Insurance and Contact pages.
Internal Linking — High-Traffic to Conversion: Add internal links from high-traffic pages with low admit connection to primary Levels of Care and VOB pages.

#	INITIATIVE	TIER	TYPE	ACTION	WHY IT MATTERS
1	Conversion Path Audit GA4	Tier 1	CRO	Audit internal-link paths from top organic landing pages to Verify Insurance and Contact pages — confirm those links exist above the fold or in body copy, and validate that GA4 event tracking is firing on the destination actions.	Conversion path gaps compound slowly; fixing them now avoids a larger gap by end of quarter (lower confidence without GA4 data). AM focus area aligns: Anchored Tides appears to be headed in the right content direction, with modality-focused pages showing enough traction.
2	Internal Linking — High-Traffic to Conversion GSC	Tier 1	Internal Linking	Add internal links from high-traffic pages with low admit connection to primary Levels of Care and VOB pages: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress, /what-is-the-fear-of-eating-in-front-of-others.	10 pages (led by /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day/, 890 clicks) carry organic traffic with limited path to admissions — targeted internal links to Levels of Care and VOB pages are the lowest-cost lever to convert that existing traffic.
3	Content Refresh — Highest-Traffic Assisted Pages GSC	Tier 2	Content	Refresh content in the "Substance-Specific Education" cluster (82 queries) (55% of clicks) to improve engagement and strengthen links to Levels of Care pages: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress, /what-is-the-fear-of-eating-in-front-of-others.	The "Substance-Specific Education" cluster (82 queries) (55% of clicks) drives meaningful traffic but shows medium admit connection — refreshed content with stronger CTAs and internal links captures more value from existing impressions. AM context: Anchored Tides appears to be headed in the right content direction, with modality-focused pages showing enough traction.
4	Title & Meta	Tier 1	Content	Audit title tags and meta descriptions	CTR improvements on existing

	Optimization **Multi-source**			on highest-impression pages to improve organic CTR: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress.	impression volume require no new traffic — they are free growth on what the site already earns.
5	Levels of Care Page Foundation **Multi-source**	**Tier 1**	**Content**	Confirm whether dedicated residential/inpatient Level of Care pages exist in the crawl. If present, verify they are indexable and nav-accessible. If absent, create dedicated pages with a clear slug (e.g. /detox, /residential-treatment), proper H1, conversion CTA, and internal links from the homepage and admissions path.	Levels of Care pages (residential/inpatient) are not confirmed in the crawl — these are Tier 1 conversion assets. Without a clearly indexed, nav-accessible page for each Level of Care, high-intent search traffic cannot land on a conversion-ready URL.
6	Conditions Hub — Topical Authority Structure **Multi-source**	**Tier 2**	**IA / Architecture**	Create a /mental-health or /conditions hub page with internal links to individual condition pages (depression, anxiety, PTSD, trauma, etc.). Each condition page should link back to the hub and forward to relevant Levels of Care pages, creating a clear topical cluster for Google to index.	Without a conditions hub, each condition page competes independently for authority. A hub structure consolidates topical signals, passes authority to Levels of Care pages, and gives Google a clear taxonomy — all three effects improve rankings on condition-specific queries.
7	Therapies Hub — Treatment Modality Architecture **Multi-source**	**Tier 2**	**IA / Architecture**	Create a /therapies or /treatment-modalities hub page listing all therapy types (CBT, DBT, EMDR, trauma-informed care, etc.) with links to individual therapy pages. Link each therapy page back to the hub and cross-link to relevant Levels of Care pages (e.g., CBT → IOP, Trauma → PHP/Residential).	Therapy pages are strong E-E-A-T differentiators but they generate authority in isolation without a hub. Organizing them under a hub page lets Google understand the program's clinical depth, improves rankings on therapy-specific searches, and strengthens internal authority flow to conversion pages.

7. Suggested Keywords for Next Quarter

ABOUT THIS LIST: Showing 8 keyword opportunities (2× monthly credit capacity of 4). Grounded in GSC query data, SF site crawl inventory, and page performance. Filtered to strategic Levels of Care, condition, and location-intent terms.

KEYWORD	SUGGESTED TYPE	TARGET	WHY IT'S SUGGESTED	GSC + SF
relapse meaning / relapse definition / definition of relapse / relapse cycle diagram / addiction relapse cycle	**CRO / supporting update**	/relapse-definition-part-of-the-addiction-cycle	49k impressions but only 0.0% CTR on /relapse-definition-part-of-the-addiction-cycle — conversion path or meta optimization can significantly increase click capture without new content.	
how long does molly stay in system / how long does molly stay in your urine / does molly show up on a drug test / molly drug test / how long does molly last in system drug test / how long do molly stay in your system	**CRO / supporting update**	/understanding-the-duration-of-molly-in-your-urine	6k impressions but only 0.1% CTR on /understanding-the-duration-of-molly-in-your-urine — conversion path or meta optimization can significantly increase click capture without new content.	
fear of eating in front of others / phobia of eating in front of others / i don't like eating in front of people / fear of eating in public /	**CRO / supporting update**	/what-is-the-fear-of-eating-in-front-of-others	879 impressions but only 0.2% CTR on /what-is-the-fear-of-eating-in-front-of-others — conversion path or meta optimization can significantly increase click capture without new content.	

is deipnophobia an eating disorder / anxiety about eating in front of people			
crystals for anxiety / best crystals for anxiety / crystals for anxiety and panic attacks / crystals good for anxiety / how to use healing crystals for anxiety / crystals for fear and anxiety / how to use crystals for anxiety	**CRO / supporting update**	/what-are-the-best-crystals-for-anxiety-and-stress	869 impressions but only 0.2% CTR on /what-are-the-best-crystals-for-anxiety-and-stress — conversion path or meta optimization can significantly increase click capture without new content.
emotional sobriety definition / emotional sobriety meaning / what is emotional sobriety / emotional sobriety	**CRO / supporting update**	/understanding-emotional-sobriety	387 impressions but only 0.3% CTR on /understanding-emotional-sobriety — conversion path or meta optimization can significantly increase click capture without new content.
iop orange county / iop in orange county	**CRO / supporting update**	/womens-addiction-treatment-center/womens-intensive-outpatient-orange-county	350 impressions but only 0.3% CTR on /womens-addiction-treatment-center/womens-intensive-outpatient-orange-county — conversion path or meta optimization can significantly increase click capture without new content.
how long does it take for alcohol to leave your system	**CRO / supporting update**	/am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day	238 impressions but only 0.4% CTR on /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day — conversion path or meta optimization can significantly increase click capture without new content.
drug addict female singer / female singer who went to rehab	**CRO / supporting update**	/female-musicians-beat-addiction	200 impressions but only 1.5% CTR on /female-musicians-beat-addiction — conversion path or meta optimization can significantly increase click capture without new content.

8. What We Track

FOCUS AREA	METRIC	SOURCE	WHY IT MATTERS
Conversion Rate	Organic conversion rate on top landing pages	**GA4**	Higher CVR on existing traffic is the most capital-efficient growth lever
Internal Link Effectiveness	Click-through from informational pages to Levels of Care and VOB pages	**GA4**	Measures whether internal linking strategy converts existing traffic to admissions pages
Content Performance	CTR improvement on high-impression non-brand queries	**GSC**	CTR gains on existing impressions drive incremental traffic without new content
Organic Sessions	Total organic sessions (QoQ)	**GA4**	Primary volume indicator for organic channel health
Qualified Calls	Organic phone calls (answered, 60s+)	**CallRail**	Strongest proxy for admits when direct admit tracking is unavailable

9. Additional Opportunities

UPSELL Custom Authority-Building Initiative

Core Levels of Care pages are confirmed present — Detox, IOP, Outpatient, and Dual Diagnosis pages are live and indexed. Domain authority is now the primary ceiling on where those pages rank for competitive treatment terms. The standard content roadmap addresses what to publish; a focused authority program removes the ranking ceiling.

EVIDENCE

Core Levels of Care pages confirmed present — site has cleared most Tier 1 structural requirements. Domain authority is now the primary ceiling on competitive treatment-term rankings.

1 confirmed high-intent topic cluster identified — authority, not content volume, is the primary ranking constraint on these terms

RECOMMENDATION

A focused link acquisition or digital PR program targeting high-intent Levels of Care pages. This is a deeper SEO investment than the standard monthly retainer covers, designed to remove the authority ceiling that content production alone cannot lift.

Recommended when authority — not content output or keyword strategy — is the confirmed bottleneck. Link acquisition and digital PR address a constraint that standard scope cannot resolve.
