

QBS

Bliss Recovery

Domain: blissrecoveryla.com	Primary Location: Manual entry needed
Program / Positioning: Addiction Treatment & Dual Diagnosis	Analysis Window: Q1 2026 (through 2026-03-12)
Planning Quarter: Q2 2026	Generated On: 2026-03-12

ACCOUNT MANAGER CONTEXT
AM's Hypothesis: Bliss Recovery is a luxury LA rehab with high brand awareness but inconsistent organic performance on care-level queries. The site is well-structured but several LOC pages appear thin. Q2 priority should be strengthening the detox and residential content clusters while ensuring the admissions page is fully optimized for high-intent traffic.
Client Sentiment: Neutral

1. What Matters Most This Quarter

GOAL TYPE	GOAL	GOAL SHIFT VS LAST QUARTER	REASON
Primary Goal/MVP NSM CalRail	736 all calls	Par	No prior-quarter goal is on record for this client. Current-quarter target is 736 all calls.
Secondary Goal/NSM GA4	900 organic sessions	Par	No prior-quarter sessions goal is on record for this client. Current-quarter target is 900 organic sessions. Traffic is led by "Other", "Residential Treatment", "Substance-Specific Education" topics (5% of clicks from "Other"). Top page: /. Notable delta: top page up 42% QoQ.

2. Where Conversions Actually Happen

TYPE	PAGE	NOTES / WHAT WE'RE LEARNING
Contact / Admissions	/contact-us	High-confidence inference: Contact page is a near-certain conversion support URL for any treatment center — it is the primary destination for admissions inquiries.
Contact / Admissions	/about/admissions	High-confidence inference: Admissions page sits at the bottom of the conversion funnel — users reaching this page have moved past evaluation and are initiating the intake process.

PATTERN	WHY IT MATTERS	EVIDENCE
High-Intent Organic Traffic Capture	Treatment-intent organic queries — detox near me, rehab programs, insurance-covered treatment — represent the strongest mid-funnel intent. Pages ranking for these terms need optimized conversion paths to close the gap between clicks and contacts.	Directional inference: Treatment-intent organic traffic is likely the strongest conversion-support pattern in this account because these queries sit closest to admission decision-making — however, page-level GA4 conversion verification is incomplete, so the full conversion contribution of this traffic remains inferred rather than confirmed.
Tracking Gap as Conversion Floor	When conversion tracking is incomplete, high-value actions (form submits, call initiations, chat starts) go unattributed. This understates the true conversion rate and creates a systematic blind spot in reporting.	Moderate-confidence inference: Tracking gaps appear to be suppressing visibility into true conversion behaviour — high-intent entry patterns are present but page-level event confirmation is incomplete, which means the reported conversion floor is likely understating actual admissions-intent activity.

SOURCE	WHAT'S CONVERTING	NOTES / WHAT WE'RE LEARNING
Website Pool CalRail	159 inbound calls (64% of all tracked calls)	This source is generating a disproportionately large share of tracked call activity at 64% — a concentration that suggests this channel is the primary driver of phone-based leads and should be treated as a protection priority rather than a passive background source.
Recovery CalRail	77 inbound calls (31% of all tracked calls)	This source is contributing a meaningful secondary share of tracked calls at 31% — a level that indicates it plays a consistent assist role in total call volume, so any deterioration here would likely weaken overall call performance even if the dominant source remains stable.

3. Top Organic Traffic Drivers

TOPIC	# QUERIES	QOQ %	TOTAL IMP.	QOQ IMP.	EXAMPLE QUERIES	ADMITTS
Other	51	-32.9%	752	-97.1%	gary papazian bliss los angeles	Low

PAGE	CLICKS	QOQ %	TOTAL IMP.	QOQ IMP.	# QUERIES	QOQ %	CTR	ADMITTS
/	524	+41.6%	64,789	+164.6%	62	+148.0%	0.8 %	Medium
Insight: Primary branded entry point serving a mix of direct, branded, and first-time visitors. Should route efficiently to Levels of Care pages and the admissions path for maximum conversion.								
/about/our-staff	31	—	1,560	—	5	—	2.0 %	Medium
Insight: Trust-building page supporting late-stage evaluation. Users here are assessing credibility before committing — strong links to admissions pages can convert this high-consideration intent.								
/about	15	-16.7%	3,587	+17.3%	4	+100.0%	0.4 %	Medium
Insight: Trust-building page supporting late-stage evaluation. Users here are assessing credibility before committing — strong links to admissions pages can convert this high-consideration intent.								
/about/our-locations	14	—	1,810	—	3	—	0.8 %	Medium
Insight: Trust-building page supporting late-stage evaluation. Users here are assessing credibility before committing — strong links to admissions pages can convert this high-consideration intent.								
/about-us/our-staff	12	+33.3%	431	+152.0%	3	+200.0%	2.8 %	Medium
Insight: Trust-building page supporting late-stage evaluation. Users here are assessing credibility before committing — strong links to admissions pages can convert this high-consideration intent.								
/our-locations	10	-23.1%	388	-70.8%	2	+100.0%	2.6 %	Medium
Insight: Location or facility page attracting geo-targeted traffic. Local intent users searching for nearby treatment — important for admissions volume from the primary service area.								
/post/pink-whitney-alcohol-percentage-what-you-should-know	8	-91.2%	18,235	-80.6%	7	-76.7%	0.0 %	Medium
Insight: Moderate-volume alcohol-awareness content. Entry-stage traffic that needs a clear route from educational content to Levels of Care pages (detox, residential).								
/luxury-experience	6	—	1,258	+234.6%	3	—	0.5 %	Low
Insight: Moderate-to-volume informational entry point with limited direct admit linkage. Awareness-stage content — internal links to Levels of Care pages are the highest-ROI improvement for this traffic.								
/addiction	4	—	315	-27.3%	2	—	1.3 %	Low
Insight: Moderate-volume informational entry point with limited direct admit linkage. Awareness-stage content — internal links to Levels of Care pages are the highest-ROI improvement for this traffic.								
/post/drug-and-alcohol-addiction-in-california-statistics-and-trends	2	-95.7%	265	-94.5%	—	-100.0%	0.8 %	Medium
Insight: Moderate-volume alcohol-awareness content. Entry-stage traffic that needs a clear route from educational content to Levels of Care pages (detox, residential).								

4. Levels of Care Overview

LEVEL OF CARE	PAGE	SEO SCORE	NOTES
Contact / Admissions	/contact-us	6/10	URL structure is reasonable (/contact-us). Inference: Content depth, CTA placement, and internal linking to this page should be verified before claiming full conversion readiness.
Detox	Not found on site	1/10	No dedicated Detox page was confirmed in the crawl — this is a Tier 1 conversion gap. A clear, dedicated page is needed before other optimization will compound.
Residential / Inpatient	Not found on site	1/10	No dedicated Residential / Inpatient page was confirmed in the crawl — this is a Tier 1 conversion gap. A clear, dedicated page is needed before other optimization will compound.
PHP / IOP	Not found on site	2/10	No dedicated PHP / IOP page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.
Outpatient	Not found on site	2/10	No dedicated Outpatient page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.
Dual Diagnosis	Not found on site	2/10	No dedicated Dual Diagnosis page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.
Verify Insurance	/insurance	6/10	URL structure is reasonable (/insurance). Inference: Content depth, CTA placement, and internal linking to this page should be verified before claiming full conversion readiness.
Primary Location	Not found on site	2/10	No dedicated Primary Location page was found in the crawl. Adding a dedicated page would improve topical authority and user navigation.

Tier 1 — Trust & Eligibility

Site is missing at Tier 1 — Trust & Eligibility. Core Levels of Care pages (detox, residential) are not conversion-ready — either blocked entirely or not clearly accessible from the main navigation. High-intent Levels of Care traffic does not land on clear primary Levels of Care page URLs. Until core Levels of Care pages are established and clearly accessible, higher-tier work will not produce meaningful results.

Tier 1 — Trust & Eligibility	Blocked
Findings: Verify Insurance / VOB page: Confirmed present — linked from main navigation (Fact). Contact / Admissions page: Confirmed present — linked from main navigation (Fact). Detox Levels of Care page: Not confirmed — no dedicated detox page found at standard paths; verify with AM and provide URL. Residential / Inpatient Level of Care page: Not confirmed — no dedicated Residential / Inpatient page found at standard paths; verify with AM and provide URL.	
Inference: High-intent traffic may not be landing on clear primary Levels of Care pages (Inference from GSC data) — review which pages are capturing Levels of Care intent queries and whether they are conversion-optimized.	
Why It Matters: Tier 1 pages are the foundation of organic admissions conversion. Without a clear VOB page, contact path, and primary Levels of Care pages, all higher-tier work cannot compound.	
Source: SF	

Tier 2 — Structural Authority	Pass
Findings: Conditions hub: Structure detected. Therapies hub: Structure detected. H1 coverage appears adequate	
Inference: Hub structures appear present. Internal linking quality and depth within the hub require manual review to confirm authority flow is functioning.	
Why It Matters: Site architecture determines how authority flows between pages. Hub structures allow Google to map topical expertise and consolidate ranking power into Levels of Care pages.	
Source: SF	

Tier 3 — Consolidation & Cleanup	Pass
Findings: No significant error pages detected. Thin page count within acceptable range. No significant Levels of Care page duplication	
Inference: Technical indicators are within a manageable range. Spot-check error pages and redirect chains for any suppression on key conversion pages.	
Why It Matters: Technical drag (errors, thin content, duplication) reduces crawl efficiency and can suppress rankings across all pages — including core conversion pages.	
Source: SF + GSC	

Tier 4 — Conversion & Differentiation	Unknown
Findings: About page: Present. Team / leadership page: Not confirmed in crawl. Alumni / aftercare page: Not confirmed in crawl	
Inference: Alumni and aftercare content is a differentiator in competitive treatment markets — its absence limits E-E-A-T signals in comparison-stage searches where multiple facilities are evaluated side-by-side.	
Why It Matters: Authority depth signals real expertise and community trust — factors that increasingly influence Google rankings for health-related (YMYL) content.	
Source: SF	

6. What We Need to Do Next

CRITICAL OBSERVATIONS
Tier 1 Diagnosis: Trust & Eligibility — foundational gaps must be resolved before content or authority work will compound.
Conversion Path Audit: Audit internal-link paths from top organic landing pages to Verify Insurance and Contact pages.
Internal Linking — High-Traffic to Conversion: Add internal links from high-traffic pages with low admit connection to primary Levels of Care and VOB pages.

#	INITIATIVE	TIER	TYPE	ACTION	WHY IT MATTERS
1	Conversion Path Audit GA4	Tier 1	CRO	Audit internal-link paths from top organic landing pages to Verify Insurance and Contact pages — confirm those links exist above the fold or in body copy, and validate that GA4 event tracking is firing on the destination actions.	Conversion path gaps compound slowly; fixing them now avoids a larger gap by end of quarter (lower confidence without GA4 data). AM focus area aligns: Bliss Recovery is a luxury LA rehab with high brand awareness but inconsistent organic performance on care-level.
2	Internal Linking — High-Traffic to Conversion GSC	Tier 1	Internal Linking	Add internal links from high-traffic pages with low admit connection to primary Levels of Care and VOB pages: /, /about/our-staff, /about, /about/our-locations, /about-us/our-staff.	10 pages (led by /, 524 clicks) carry organic traffic with limited path to admissions — targeted internal links to Levels of Care and VOB pages are the lowest-cost lever to convert that existing traffic.
3	Content Refresh — Highest-Traffic Assisted Pages GSC	Tier 2	Content	Refresh content in the "Other" cluster (51 queries) (2% of clicks) to improve engagement and strengthen links to Levels of Care pages: /, /about/our-staff, /about, /about/our-locations, /about-us/our-staff.	The "Other" cluster (51 queries) (2% of clicks) drives meaningful traffic but shows low admit connection — refreshed content with stronger CTAs and internal links captures more value from existing impressions. AM context: Bliss Recovery is a luxury LA rehab with high brand awareness but inconsistent organic performance on care-level.
4	Title & Meta Optimization Multi-source	Tier 1	Content	Audit title tags and meta descriptions on highest-impression pages to improve organic CTR: /, /about/our-staff, /about, /about/our-locations.	CTR improvements on existing impression volume require no new traffic — they are free growth on what the site already earns.
5	Levels of Care Page Foundation Multi-source	Tier 1	Content	Confirm whether dedicated detox/detoxification and residential/inpatient Level of Care pages exist in the crawl. If present, verify they are indexable and nav-accessible. If absent, create dedicated pages with a clear slug (e.g. /detox, /residential-treatment), proper H1, conversion CTA, and internal links from the homepage and admissions path.	Levels of Care pages (detox/detoxification, residential/inpatient) are not confirmed in the crawl — these are Tier 1 conversion assets. Without a clearly indexed, nav-accessible page for each Level of Care, high-intent search traffic cannot land on a conversion-ready URL.

7. Suggested Keywords for Next Quarter

ABOUT THIS LIST: Showing 6 keyword opportunities (2 x monthly credit capacity of 8). Grounded in GSC query data, SF site crawl inventory, and page performance. Filtered to strategic Levels of Care, condition, and location-intent terms.

8. What We Track

FOCUS AREA	METRIC	SOURCE	WHY IT MATTERS
Conversion Rate	Organic conversion rate on top landing pages	GA4	Higher CVR on existing traffic is the most capital-efficient growth lever
Internal Link Effectiveness	Click-through from informational pages to Levels of Care and VOB pages	GA4	Measures whether internal linking strategy converts existing traffic to admissions pages
Content Performance	CTR improvement on high-impression non-brand queries	GSC	CTR gains on existing impressions drive incremental traffic without new content
Organic Sessions	Total organic sessions (QoQ)	GA4	Primary volume indicator for organic channel health
Qualified Calls	Organic phone calls (answered, 60s+)	CalRail	Strongest proxy for admits when direct admit tracking is unavailable

9. Additional Opportunities

UPSELL Custom Authority-Building Initiative
Site is at Tier 1 — Levels of Care page rankings on high-value treatment terms are constrained by domain authority. The standard content roadmap addresses what to publish, not the ceiling that prevents those pages from ranking.
EVIDENCE Tier 1 site diagnosis (Trust & Eligibility) — domain authority is the primary constraint on Levels of Care page rankings, which content production alone cannot break through 3 confirmed high-intent topic clusters identified — authority, not content volume, is the primary ranking constraint on these terms
RECOMMENDATION A focused link acquisition or digital PR program targeting high-intent Levels of Care pages. This is a deeper SEO investment than the standard monthly retainer covers, designed to remove the authority ceiling that content production alone cannot lift. Recommended when authority — not content output or keyword strategy — is the confirmed bottleneck. Link acquisition and digital PR address a constraint that standard scope cannot resolve.
