Anchored Tides Recovery

Domain: anchoredtidesrecovery.com	Primary Location: Huntington Beach, CA
Program / Positioning: Addiction Treatment	Analysis Window: Q1 2026 (through 2026-03-12)
Planning Quarter: Q2 2026	Generated On: 2026-03-12

ACCOUNT MANAGER CONTEXT

AM's Hypothesis: Given that I'm new to the account and have not had a chance to meet with anyone from Anchored Tides yet, my hypothesis should be taken with a grain of salt. I'll have better insights once I get into the day-to-day work and spend more time grinding through the data.

That said, Anchored Tides does not look like an account that needs a reset. It looks like an account where the right content direction is already taking shape, with recent modality-focused pages showing enough traction to suggest things are moving in the right direction, even if traffic and call pacing are sitting behind the initial goal.

Because I do not fully understand how those goals are being calculated yet, I'm hesitant to put too much weight on that gap and would chalk some of it up to automation not fully understanding the nuance.

For Q2, the priority should be to keep strengthening the women's modality and continuum-of-care cluster while tightening the admissions path, because based on our own framework, admits should matter more than traffic at a high level, and relevance should be improved before more volume is added.

Previous Quarter Assessment: From an SEO standpoint, Anchored Tides has one of the stronger content infrastructures in my client base. Even so, the account is still operating below its potential because of several factors, including a preventable technical issue at the root. My understanding is that this was tied to a solution that was not fully implemented in Q1.

The conversion scaffolding is in place, and it appears to have been strengthened in Q1 as well. Q1 search visibility looks softer in reporting than it should, but that seems to be driven more by a crawl issue than by any real content or strategy gap.

With only four credits per month, Q2 should be protective and structural before it becomes expansive.

Client Sentiment: Neutral

1. What Matters Most This Quarter

GOAL TYPE	GOAL	GOAL SHIFT VS LAST QUARTER	REASON
Primary Goal/MVP NSM CallIR all	160 organic + gmb + ai llm calls	-14%	Last quarter goal: 187 organic + gmb + ai llm calls. Last quarter actual: 102 (54.5% of goal). Performance fell short of target by 85 organic + gmb + ai llm calls (45%). Available evidence points to a likely crawl or indexation issue that suppressed organic visibility during the prior quarter, limiting inbound demand before it reached the conversion stage. As a result, the current-quarter goal is being reduced to 160 organic + gmb + ai llm calls tracked via CallRail while structural and conversion-path improvements are implemented.
Secondary Goal/N SM GA4	4,070 organic sessions	-16%	Last quarter goal: 4,854 organic sessions. Last quarter actual: 2,781 (57.3% of goal). Performance fell short of target by 2,073 sessions (43%). Available evidence points to a likely mix of crawl constraints and content maturity gaps that held organic sessions below target — pages are indexed but not yet ranking with enough visibility to drive their full traffic potential. As a result, the current-quarter sessions goal is being reduced to 4,070 while crawl quality and content depth improvements are prioritized. Traffic is led by "Substance-Specific Education", "Other", "Informational / Education" topics (9% of clicks from "Substance-Specific Education"). Top page: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not. Notable delta: am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day down 15% QoQ.

2. Where Conversions Actually Happen

TYPE	PAGE / PATTERN	NOTES / WHAT WE'RE LEARNING
Service Page	/programs/detox	Moderate-confidence inference: Detox service pages attract near-decision query traffic — users researching detox are typically closer to admission than users at earlier awareness stages.
Service Page	/programs/residential	Moderate-confidence inference: Residential treatment pages capture users comparing inpatient options — high intent relative to informational pages.

PATTERN	WHY IT MATTERS	EVIDENCE
High-Intent Organic Traffic Capture	Treatment-intent organic queries — detox near me, rehab programs, insurance-covered treatment — represent the strongest mid-funnel intent. Pages ranking for these terms need optimized conversion paths to close the gap between clicks and contacts.	Directional inference: Treatment-intent organic traffic is likely the strongest conversion-support pattern in this account because these queries sit closest to admission decision-making — however, page-level GA4 conversion verification is incomplete, so the full conversion contribution of this traffic remains inferred rather than confirmed.
Tracking Gap as Conversion Floor	When conversion tracking is incomplete, high-value actions (form submits, call initiations, chat starts) go unattributed. This understates the true conversion rate and creates a systematic blind spot in reporting.	Moderate-confidence inference: Tracking gaps appear to be suppressing visibility into true conversion behaviour — high-intent entry patterns are present but page-level event confirmation is incomplete, which means the reported conversion floor is likely understating actual admissions-intent activity.

SOURCE	WHAT'S CONVERTING	NOTES / WHAT WE'RE LEARNING
NEW GMB CallRail	73 inbound calls (42% of all tracked calls)	This source is generating a disproportionately large share of tracked call activity at 42% — a concentration that suggests this channel is the primary driver of phone-based leads and should be treated as a protection priority rather than a passive background source.
ATR Pool CallRail	39 inbound calls (23% of all tracked calls)	This source is contributing a meaningful secondary share of tracked calls at 23% — a level that indicates it plays a consistent assist role in total call volume, so any deterioration here would likely weaken overall call performance even if the dominant source remains stable.

3. Top Organic Traffic Drivers

TOPIC	# QUERIES	QOQ QUERIES	IMPRESSIONS	QOQ IMPRESSIONS	EXAMPLE QUERIES	ADMITS
Substance-Specific Education	82	+20.6%	8,842	+3.6%	do alcoholics drink every day can you be an alcoholic without drinking off does an alcoholic drink every day	Medium
Insight: 55% of clicks. Supporting traffic that assists conversion pathway.						
Other	45	-6.3%	15,669	-26.7%	is social media like a drug? high tolerance meaning anchor tides	Low
Insight: 11% of clicks. Low admit connection — mostly informational.						
Informational / Education	39	+11.4%	74,081	+975.8%	people who never leave their hometown self forgiveness in recovery how long does molly stay in system	Low
Insight: 11% of clicks. Low admit connection — mostly informational.						
Mental Health / Conditions	13	-67.5%	2,505	-59.9%	best crystal for anxiety and panic attacks crystals for anxiety and panic attacks hometown anxiety	Medium
Insight: 3% of clicks. Supporting traffic that assists conversion pathway.						
Detox	9	+800.0%	345	+762.5%	alcohol withdrawal symptoms activated charcoal for the detox alcohol withdrawal	High
Insight: 2% of clicks. High-intent service traffic — directly tied to admissions.

Insight: Moderate-volume informational entry point with limited direct admit linkage. Awareness-stage content — internal links to service pages are the highest-ROI improvement for this traffic.								
/is-social-media-a-drug/	33	-76.3%	2,754	-30.9%	3	+0.0%	1.2%	Medium
Insight: Moderate-volume substance-specific awareness content. Educational entry point that needs targeted internal links to appropriate service pages to convert traffic.								

4. Site Service Overview

SERVICE	EXAMPLE PAGE
Detox	Manual entry needed
Residential / Inpatient	Manual entry needed
PHP / IOP	Manual entry needed
Outpatient	Manual entry needed
Dual Diagnosis	Manual entry needed
Verify Insurance	Manual entry needed
Primary Location	Manual entry needed
Therapies	Manual entry needed

5. SEO Tier Diagnosis

pages are strong, clear, and properly indexed, higher-tier work will not produce meaningful results.

6. What We Need to Do Next

#	INITIATIVE	TIER	ACTION	REASON
1	Admissions Pathway Clarity Multi-source	Tier 1	Strengthen Verify Insurance and admissions entry points to reduce friction on high-intent traffic	VOB and contact pages are the primary conversion mechanism — unclear pathways lose admits AM focus area aligns: Given that I’m new to the account and have not had a chance to meet with anyone from Ancho.
2	Core Service Page Foundation Multi-source	Tier 1	Refresh and consolidate primary detox and residential intent so Google sees one clear service path per treatment level	Core service pages are the foundation for search trust — without clear primary URLs, nothing else compounds
3	Internal Linking — High-Traffic to Conversion GSC	Tier 1	Add internal links from high-traffic pages with low admit connection to primary service and VOB pages: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-ever-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress, /what-is-the-fear-of-eating-in-front-of-others	10 pages (led by /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day/, 878 clicks) carry organic traffic with limited path to admissions — targeted internal links to service and VOB pages are the lowest-cost lever to convert that existing traffic
4	Conditions Hub Structure Multi-source	Tier 2	Build a conditions hub to support authority flow into existing service pages	Hub structure lets Google understand topical relationships and pass authority to conversion pages
5	Therapies Architecture Multi-source	Tier 2	Organize treatment modalities into a therapies hub that reinforces service page authority	Therapy pages support E-E-A-T and differentiate the program in competitive searches

7. Suggested Keywords for Next Quarter

Showing up to 8 keyword opportunities (2x monthly credit capacity of 4). Grounded in GSC query data, site crawl inventory, and page performance. Filtered to strategic service, program, condition, and location-intent terms.

KEYWORD	RECOMMENDATION TYPE	TARGET PAGE / ASSET	WHY IT'S RECOMMENDED	SOURCE
relapse meaning	Create new content	New content needed	48k impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC
relapse definition	Create new content	New content needed	13k impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC
how long does molly stay in system	CRO / supporting update	/understanding-the-duration-of-molly-in-your-urine	6k impressions but only 0.1% CTR on /understanding-the-duration-of-molly-in-your-urine — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
how long does molly stay in your urine	Create new content	New content needed	2k impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC
definition of relapse	Create new content	New content needed	1k impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC
fear of eating in front of others	CRO / supporting update	/what-is-the-fear-of-eating-in-front-of-others	872 impressions but only 0.2% CTR on /what-is-the-fear-of-eating-in-front-of-others — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
crystals for anxiety	CRO / supporting update	/what-are-the-best-crystals-for-anxiety-and-stress	865 impressions but only 0.2% CTR on /what-are-the-best-crystals-for-anxiety-and-stress — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
emotional sobriety definition	Create new content	New content needed	387 impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC

8. What We Track

FOCUS AREA	METRIC	SOURCE	WHY IT MATTERS
Admissions Conversions	Verify Insurance / VOB form submits + contact form submits + qualified organic calls	GA4 CallRail	Directly measures admission-driving actions from organic traffic
Service Page Visibility	GSC clicks to primary service pages (detox, residential, PHP/IOP)	GSC	Measures whether core pages are capturing high-intent search demand
Internal Link Effectiveness	Click-through from informational pages to service/VOB pages	GA4	Measures whether internal linking strategy converts existing traffic to admissions pages
Authority Coverage	Organic sessions to conditions hub pages	GA4	Tracks whether hub structure is attracting topical authority traffic
Therapy Page Performance	GSC impressions and clicks for therapy-related queries	GSC	Measures whether therapy content is capturing differentiation searches
Organic Sessions	Total organic sessions (QoQ)	GA4	Primary volume indicator for organic channel health
Qualified Calls	Organic phone calls (answered, 60s+)	CallRail	Strongest proxy for admits when direct admit tracking is unavailable

9. Additional Opportunities

UPSELL Custom Authority-Building Initiative

Site is at Tier 1 — service-page rankings on high-value treatment terms are constrained by domain authority. The standard content roadmap addresses what to publish, not the ceiling that prevents those pages from ranking.

EVIDENCE

Tier 1 site diagnosis (Trust & Eligibility) — domain authority is the primary constraint on service-page rankings, which content production alone cannot break through

1 confirmed high-intent topic cluster identified — authority, not content volume, is the primary ranking constraint on these terms

RECOMMENDATION

A focused link acquisition or digital PR program targeting high-intent service pages. This is a deeper SEO investment than the standard monthly retainer covers, designed to remove the authority ceiling that content production alone cannot lift.

Recommended when authority — not content output or keyword strategy — is the confirmed bottleneck. Link acquisition and digital PR address a constraint that standard scope cannot resolve.
