QBS

Anchored Tides Recovery

Domain: anchoredtidesrecovery.com
Program / Positioning: Addiction Treatment
Planning Quarter: Q2 2026
Primary Location: Huntington Beach, CA
Analysis Window: Q1 2026 (through 2026-03-12)
Generated On: 2026-03-12

ACCOUNT MANAGER CONTEXT

AM's Hypothesis: Anchored Tides appears to be headed in the right content direction, with modality-focused pages showing enough traction to support the claim. For Q2, the priority should be to keep strengthening the women's continuum-of-care cluster while tightening the admissions path, with more weight placed on relevance and admits than on raw traffic alone. There is an issue with the blog displaying currently (Trevor cited Elementor errors as the cause) and that will have to be solved.

Previous Quarter Assessment: Anchored Tides appears to have a strong content foundation, but the account is still operating below potential in part because the homepage was set to noindex, which likely limited visibility and authority flow in Q1. The conversion scaffolding appears to be in place, and with only four credits per month, Q2 should stay protective and structural before becoming expansive.

Client Sentiment: Neutral

1. What Matters Most This Quarter

GOAL TYPE	GOAL	GOAL SHIFT VS LAST QUARTER	REASON
Primary Goal/MVP NSM CallRail	160 organic + gmb + ai llm calls	-14%	Last quarter goal: 187 organic + gmb + ai llm calls. Last quarter actual: 102 (54.5% of goal). Performance fell short of target by 85 organic + gmb + ai llm calls (45%). Available evidence points to a likely crawl or indexation issue that suppressed organic visibility during the prior quarter, limiting inbound demand before it reached the conversion stage. As a result, the current-quarter goal is being reduced to 160 organic + gmb + ai llm calls tracked via CallRail while structural and conversion-path improvements are implemented.
Secondary Goal/NSM GA4	4,070 organic sessions	-16%	Last quarter goal: 4,854 organic sessions. Last quarter actual: 2,781 (57.3% of goal). Performance fell short of target by 2,073 sessions (43%). Available evidence points to a likely mix of crawl constraints and content maturity gaps that held organic sessions below target — pages are indexed but not yet ranking with enough visibility to drive their full traffic potential. As a result, the current-quarter sessions goal is being reduced to 4,070 while crawl quality and content depth improvements are prioritized. Traffic is led by "Substance-Specific Education", "Other", "Informational / Education" topics (9% of clicks from "Substance-Specific Education"). Top page: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not. Notable delta: what-never-leaving-your-hometown-does-to-your-brain down 20% QoQ.

2. Where Conversions Actually Happen

Top Converting Pages

TYPE	PAGE	NOTES / WHAT WE'RE LEARNING
Contact / Admissions	`/contact-us/`	Confirmed live page — primary admissions contact path. Direct admit conversion happens here; ensure form tracking is active and the page is linked from all high-traffic organic pages.
Verify Insurance	`/admissions-and-alcohol-rehab-insurance/`	Confirmed live page — insurance verification and admissions intake. Critical mid-funnel conversion asset; nav prominence and internal link coverage directly influence conversion capture.

Top Conversion Patterns

PATTERN	WHY IT MATTERS	EVIDENCE
High-Intent Organic Traffic Capture	Treatment-intent organic queries — detox near me, rehab programs, insurance-covered treatment — represent the strongest mid-funnel intent. Pages ranking for these terms need optimized conversion paths to close the gap between clicks and contacts.	Directional inference: Treatment-intent organic traffic is likely the strongest conversion-support pattern in this account because these queries sit closest to admission decision-making — however, page-level GA4 conversion verification is incomplete, so the full conversion contribution of this traffic remains inferred rather than confirmed.
Tracking Gap as Conversion Floor	When conversion tracking is incomplete, high-value actions (form submits, call initiations, chat starts) go unattributed. This understates the true conversion rate and creates a systematic blind spot in reporting.	Moderate-confidence inference: Tracking gaps appear to be suppressing visibility into true conversion behaviour — high-intent entry patterns are present but page-level event confirmation is incomplete, which means the reported conversion floor is likely understating actual admissions-intent activity.

Top Converting Sources

SOURCE	WHAT'S CONVERTING	NOTES / WHAT WE'RE LEARNING
NEW GMB **CallRail**	73 inbound calls (42% of all tracked calls)	This source is generating a disproportionately large share of tracked call activity at 42% — a concentration that suggests this channel is the primary driver of phone-based leads and should be treated as a protection priority rather than a passive background source.
ATR Pool **CallRail**	39 inbound calls (23% of all tracked calls)	This source is contributing a meaningful secondary share of tracked calls at 23% — a level that indicates it plays a consistent assist role in total call volume, so any deterioration here would likely weaken overall call performance even if the dominant source remains stable.

3. Top Organic Traffic Drivers

Top Traffic Topics GSC

TOPIC	# QUERIES	QOQ QUERIES	TOTAL IMP.	QOQ IMP.	EXAMPLE QUERIES	▯ ADMITS

Insight: Moderate-volume substance-specific awareness content. Educational entry point that needs targeted internal links to appropriate Levels of Care pages to convert traffic.								

4. Levels of Care Overview

Levels of Care Screaming Frog

LEVEL OF CARE	PAGE	SEO SCORE	NOTES
Contact /	/contact-us/	8/10	Confirmed live (HTTP 200). Clean, short slug. Verify form submission

Admissions			events are tracked in GA4 and that the page is linked from main navigation, footer, and all high-traffic organic pages.
Verify Insurance	/admissions-and-alcohol-rehab-insurance/	5/10	Confirmed live (HTTP 200). Slug is keyword-dense and long — consider a cleaner canonical (e.g., /verify-insurance/) once ranking equity is established. Confirm GA4 tracks form submissions separately from contact form.
Detox	/womens-addiction-treatment-center/detoxification/	7/10	Confirmed live (HTTP 200). Keyword-matched slug under the women's treatment hub. Ensure H1 includes 'detox' and 'women' and that the page links to Contact and VOB pages with clear CTAs.
Residential / Inpatient	/womens-addiction-treatment-center/womens-drug-rehab/	6/10	Confirmed live (HTTP 200). Page branded as 'Women's Drug Rehab' — H1 and meta description should include 'residential' and 'inpatient' to capture those query variants. Confirm internal linking from high-intent traffic pages.
PHP / IOP	/womens-addiction-treatment-center/womens-partial-hospitalization-program/ and /womens-addiction-treatment-center/womens-intensive-outpatient-orange-county/	6/10	Both pages confirmed live (HTTP 200). PHP and IOP split into separate pages — good for topical targeting. Geo-modified IOP slug ('orange-county') targets local queries well. Confirm hub links to both from /womens-addiction-treatment-center/.
Outpatient	/womens-addiction-treatment-center/outpatient-treatment-in-orange-county/	5/10	Confirmed live (HTTP 200). Geo-modified slug with 'orange-county' is locally targeted. Ensure standard 'outpatient treatment' H1 variant is included to capture non-geo queries.
Dual Diagnosis	/womens-addiction-treatment-center/dual-diagnosis/	8/10	Confirmed live (HTTP 200). Clean, keyword-exact slug. Ensure co-occurring disorders and mental health language appear in H1 variants and that this page receives internal links from condition-cluster pages.
Primary Location	/service-areas/	4/10	Confirmed live (HTTP 200). Generic slug — no keyword signal for Huntington Beach or Orange County. A dedicated location page (e.g., /drug-rehab-huntington-beach/) would consolidate local authority more effectively.

5. SEO Tier Diagnosis

Tier 1 — Trust & Eligibility

Site has all core Levels of Care pages confirmed live via HTTP verification of homepage navigation links. The standard guessed paths (/programs/detox, /programs/residential) all 301-redirect to the homepage — the real structure lives under /womens-addiction-treatment-center/ with women-specific slugs. Contact (/contact-us/) and Verify Insurance (/admissions-and-alcohol-rehab-insurance/) are confirmed live. The site passes Tier 1 on page existence. The primary gap is Tier 2: no conditions or therapies hub structure exists, meaning condition and therapy pages accumulate authority in isolation rather than consolidating it into the Levels of Care hierarchy. The primary optimization lever this quarter is internal linking from high-traffic informational pages to confirmed LOC pages, followed by hub architecture.

Tier 1 — Trust & Eligibility

Pass

Findings: Verify Insurance / VOB page: Confirmed live at /admissions-and-alcohol-rehab-insurance/ (HTTP 200). Contact / Admissions page: Confirmed live at /contact-us/ (HTTP 200). Detox Levels of Care page: Confirmed live at /womens-addiction-treatment-center/detoxification/ (HTTP 200). Residential Levels of Care page: Confirmed live at /womens-addiction-treatment-center/womens-drug-rehab/ (HTTP 200). Note: Standard guessed paths (/programs/detox, /programs/residential) all 301-redirect to homepage — actual pages live under /womens-addiction-treatment-center/.

Inference: All four core Tier 1 pages exist. Optimization gaps are in slug clarity (residential branded as 'drug-rehab'), internal link coverage from high-traffic organic pages, and conversion path continuity (GA4 form tracking unconfirmed).

Why It Matters: Tier 1 page existence is confirmed. The focus shifts to ensuring these pages are internally linked, properly tracked, and present in navigation — not whether they exist.

Source: HTTP Verification (homepage nav crawl)

Tier 2 — Structural Authority

Blocked

Findings: Conditions hub: Not detected in crawl. Therapies hub: Not detected in crawl. H1 coverage appears adequate.

Inference: Without hub structures, condition and therapy pages may be fragmenting authority rather than consolidating it into Levels of Care pages. Hub pages create a topical map that Google uses to distribute ranking signals.

Why It Matters: Site architecture determines how authority flows between pages. Hub structures allow Google to map topical expertise and pass ranking power into Levels of Care and program pages.

Source: Screaming Frog

Tier 3 — Consolidation & Cleanup

Pass

Findings: No significant error pages detected. Thin page count within acceptable range. No significant Levels of Care page duplication.

Inference: Technical indicators are within a manageable range. Spot-check error pages and redirect chains for any suppression on key conversion pages.

Why It Matters: Technical drag (errors, thin content, duplication) reduces crawl efficiency and can suppress rankings across all pages — including core conversion pages.

Source: Screaming Frog + GSC

Tier 4 — Conversion & Differentiation

Partial

Findings: About page: Confirmed live at /about-anchored-tides/ (HTTP 200). Team / leadership page: Confirmed live at /meet-the-team/ (HTTP 200). Alumni / aftercare page: Not confirmed in crawl — no dedicated alumni or aftercare URL found.

Inference: About and team pages are confirmed, which provides baseline E-E-A-T signals. Alumni and aftercare content — a key differentiator in the behavioral health market — is the remaining Tier 4 gap.

Why It Matters: Authority depth signals real expertise and community trust — factors that increasingly influence Google rankings for health-related (YMYL) content. Alumni content is the highest-conversion differentiator in comparison-stage searches.

Source: HTTP Verification (homepage nav crawl)

6. What We Need to Do Next

CRITICAL OBSERVATIONS

Tier 1 status: Pass — all core Levels of Care pages confirmed live via HTTP verification. Focus shifts to internal linking, conversion tracking, and LOC slug optimization.

Conversion Path Instrumentation: Install separate GA4 form_submit events on /contact-us/ (contact) and /admissions-and-alcohol-rehab-insurance/ (VOB) — do not group both under a single event.

Internal Linking — High-Traffic to Conversion: Add direct internal links from top organic pages to /contact-us/ and /admissions-and-alcohol-rehab-insurance/.

#	INITIATIVE	TIER	TYPE	ACTION	WHY IT MATTERS
1	Conversion Path Instrumentation GA4	Tier 1	CRO	1. Install GA4 form_submit events on /contact-us/ (contact form) and /admissions-and-alcohol-rehab-insurance/ (VOB form) as separate named events — do not group both under a single 'form_submit' catch-all. 2. Confirm CallRail dynamic number insertion is firing on both pages. 3. Add a 'Thank You' page redirect or modal confirmation after form submission on both pages. 4. Set up a GA4 conversion funnel: organic landing page → LOC page → contact/VOB page → confirmation. 5. Export the funnel drop-off data as the baseline for Q2 CRO prioritization.	Without separated event tracking on the two primary conversion pages, the account cannot attribute admissions volume to organic sessions or identify where the conversion path breaks. Every organic session that reaches /contact-us/ or /admissions-and-alcohol-rehab-insurance/ without a tracked event is an invisible admission.
2	Internal Linking — High-Traffic to Conversion GSC	Tier 1	Internal Linking	Add internal links from high-traffic pages with low admit connection to primary Levels of Care and VOB pages: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress, /what-is-the-fear-of-eating-in-front-of-others	10 pages (led by /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day/, 890 clicks) carry organic traffic with limited path to admissions — targeted internal links to Levels of Care and VOB pages are the lowest-cost lever to convert that existing traffic
3	Content Refresh — Highest-Traffic Assisted Pages GSC	Tier 2	Content	Refresh content in the "Substance-Specific Education" cluster (82 queries) (55% of clicks) to improve engagement and strengthen links to Levels of Care pages: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain, /female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress, /what-is-the-fear-of-eating-in-front-of-others	The "Substance-Specific Education" cluster (82 queries) (55% of clicks) drives meaningful traffic but shows medium admit connection — refreshed content with stronger CTAs and internal links captures more value from existing impressions AM context: Anchored Tides appears to be headed in the right content direction, with modalit.
4	Title & Meta Optimization Multi-source	Tier 1	Content	Audit title tags and meta descriptions on highest-impression pages to improve organic CTR: /am-i-an-alcoholic-can-you-be-an-alcoholic-and-not-drink-every-day, /what-never-leaving-your-hometown-does-to-your-brain,	CTR improvements on existing impression volume require no new traffic — they are free growth on what the site

				/female-musicians-beat-addiction, /what-are-the-best-crystals-for-anxiety-and-stress	
5	Levels of Care Page Foundation **Multi-source**	**Tier 1**	**Content**	All core Levels of Care pages confirmed live via HTTP verification of homepage navigation — the actual URL structure is /womens-addiction-treatment-center/ (not /programs/). Standard guessed paths (/programs/detox, /programs/residential) 301-redirect to the homepage. Immediate implementation steps: 1. Add internal links from top organic traffic pages to each confirmed LOC page (detoxification, womens-drug-rehab, womens-partial-hospitalization-program, womens-intensive-outpatient-orange-county, outpatient-treatment-in-orange-county, dual-diagnosis). 2. Ensure each LOC page has an H1 with both the program type and 'women' (e.g., 'Women's Detox Program'). 3. Confirm all LOC pages are linked from the main nav and footer. 4. Verify GA4 and CallRail fire on each LOC page to track treatment-intent sessions.	Levels of Care pages (detox, residential, PHP, IOP) are confirmed live under /womens-addiction-treatment-center/. The gap is not page existence — it is that high-traffic informational organic pages do not link to them, so treatment-intent sessions cannot reach the conversion path. Internal linking from confirmed high-traffic pages is the highest-ROI, zero-content-cost fix.
6	Admissions Pathway — Verify Insurance & Contact **Multi-source**	**Tier 1**	**CRO**	Contact / Admissions page is confirmed live at /contact-us/ and Verify Insurance is confirmed live at /admissions-and-alcohol-rehab-insurance/. Audit main navigation and footer to confirm both pages are linked. Verify GA4 event tracking is active on contact form submissions and insurance form submissions separately. Add direct internal links from all top organic landing pages to both /contact-us/ and /admissions-and-alcohol-rehab-insurance/.	Verify Insurance and Contact / Admissions are the last digital steps before a user contacts admissions. Every organic landing page that reaches this stage without a clear path to these confirmed pages is a measurable conversion leak. Navigation and footer placement are the lowest-cost fix.
7	Conditions Hub — Topical Authority Structure **Multi-source**	**Tier 2**	**IA / Architecture**	Create a /mental-health or /conditions hub page with internal links to individual condition pages (depression, anxiety, PTSD, trauma, etc.). Each condition page should link back to the hub and forward to relevant Levels of Care pages, creating a clear topical cluster for Google to index.	Without a conditions hub, each condition page competes independently for authority. A hub structure consolidates topical signals, passes authority to Levels of Care pages, and gives Google a clear taxonomy — all three effects improve rankings on condition-specific queries.
8	Therapies Hub — Treatment Modality Architecture **Multi-source**	**Tier 2**	**IA / Architecture**	Create a /therapies or /treatment-modalities hub page listing all therapy types (CBT, DBT, EMDR, trauma-informed care, etc.) with links to individual therapy pages. Link each therapy page back to the hub and cross-link to relevant Levels of Care pages (e.g., CBT → IOP, Trauma → PHP/Residential).	Therapy pages are strong E-E-A-T differentiators but they generate authority in isolation without a hub. Organizing them under a hub page lets Google understand the program's clinical depth, improves rankings on therapy-specific searches, and strengthens internal authority flow to conversion pages.

7. Suggested Keywords for Next Quarter

ABOUT THIS LIST: Showing up to 8 keyword opportunities (2× monthly credit capacity of 4). Grounded in GSC query data, site crawl inventory, and page performance. Filtered to strategic Level of Care, program, condition, and location-intent terms.

KEYWORD	SUGGESTED TYPE	TARGET	WHY IT'S SUGGESTED	SOURCE
relapse meaning / relapse definition / definition of relapse / relapse cycle diagram / addiction relapse cycle	**Create new content**	/blog/relapse-meaning	49k impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	**GSC**

how long does molly stay in system / how long does molly stay in your urine / does molly show up on a drug test / molly drug test / how long does molly last in system drug test / how long do molly stay in your system	CRO / supporting update	/understanding-the-duration-of-molly-in-your-urine	6k impressions but only 0.1% CTR on /understanding-the-duration-of-molly-in-your-urine — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
how long does 25 mg of tramadol stay in your system	Create new content	/blog/how-long-does-tramadol-stay-in-your-system	Opioid detection-stage query — users searching this are in early awareness of dependency or preparing for treatment. Content targeting this query should link to detox and admissions pages. Distinct from stimulant (MDMA) queries and should not be grouped with molly-intent keywords.	
how long does it take for alcohol to leave your system / how long does it take for alcohol to get out of your system / how long does alcohol withdrawal last	Create new content	/blog/alcohol-withdrawal	High-intent detox-stage queries with no existing page — content covering alcohol withdrawal and detox duration would capture near-admission traffic.	
fear of eating in front of others / phobia of eating in front of others / i don't like eating in front of people / fear of eating in public / is deipnophobia an eating disorder / anxiety about eating in front of people	CRO / supporting update	/what-is-the-fear-of-eating-in-front-of-others	879 impressions but only 0.2% CTR on /what-is-the-fear-of-eating-in-front-of-others — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
crystals for anxiety / best crystals for anxiety / crystals for anxiety and panic attacks / crystals good for anxiety / how to use healing crystals for anxiety / crystal for anxiety and panic attacks / grounding stones for anxiety / best crystal for anxiety and panic attacks / how to use crystals for anxiety	CRO / supporting update	/what-are-the-best-crystals-for-anxiety-and-stress	869 impressions but only 0.2% CTR on /what-are-the-best-crystals-for-anxiety-and-stress — conversion path or meta optimization can significantly increase click capture without new content.	GSC Screaming Frog
emotional sobriety definition / emotional sobriety meaning / what is emotional sobriety / emotional sobriety	Create new content	/blog/emotional-sobriety-definition	387 impressions this quarter with no existing page capturing this query — new content would close the gap between search demand and site coverage.	GSC
iop orange county / iop in orange county	CRO / supporting update	/womens-addiction-treatment-center/womens-intensive-outpatient-orange-county/	350 impressions this quarter. A dedicated IOP Orange County page is confirmed live at /womens-addiction-treatment-center/womens-intensive-outpatient-orange-county/ (HTTP 200). Geo-modified slug already targets local queries. CRO opportunity: optimize the meta title and H1 to include 'IOP Orange County' explicitly, ensure the page is internally linked from /contact-us/ and /admissions-and-alcohol-rehab-insurance/, and add local schema markup. No new page is needed — conversion optimization of the existing page is the correct action.	GSC

drug addict female singer / female singer who went to rehab	**CRO / supporting update**	/female-musicians-beat-addiction	200 impressions but only 1.5% CTR on /female-musicians-beat-addiction — conversion path or meta optimization can significantly increase click capture without new content.	**GSC** **Screaming Frog**
is social media a drug / social media is a drug / is social media like a drug?	**CRO / supporting update**	/is-social-media-a-drug	194 impressions but only 1.0% CTR on /is-social-media-a-drug — conversion path or meta optimization can significantly increase click capture without new content.	**GSC** **Screaming Frog**

8. What We Track

FOCUS AREA	METRIC	SOURCE	WHY IT MATTERS
Conversion Rate	Organic conversion rate on top landing pages	**GA4**	Higher CVR on existing traffic is the most capital-efficient growth lever
Internal Link Effectiveness	Click-through from informational pages to Levels of Care and VOB pages	**GA4**	Measures whether internal linking strategy converts existing traffic to admissions pages
Content Performance	CTR improvement on high-impression non-brand queries	**GSC**	CTR gains on existing impressions drive incremental traffic without new content
Organic Sessions	Total organic sessions (QoQ)	**GA4**	Primary volume indicator for organic channel health
Qualified Calls	Organic phone calls (answered, 60s+)	**CallRail**	Strongest proxy for admits when direct admit tracking is unavailable

9. Additional Opportunities

UPSELL Custom Authority-Building Initiative

Tier 1 (Trust & Eligibility) passes — all core Levels of Care pages are confirmed live via HTTP verification. The primary structural gap is Tier 2 (Structural Authority): no conditions hub or therapies hub exists, so topical signals are fragmented across standalone pages. Domain authority is the secondary growth ceiling that hub architecture and content production alone cannot break through — that ceiling constrains Levels of Care page rankings on high-value treatment terms.

EVIDENCE

Tier 1 (Trust & Eligibility) passes. Tier 2 (Structural Authority) is the primary gap — no conditions hub or therapies hub detected in crawl. Domain authority is the secondary constraint on Levels of Care page rankings, which hub architecture and content volume alone cannot resolve.

1 confirmed high-intent topic cluster identified — authority, not content volume, is the primary ranking constraint on these terms

RECOMMENDATION

A focused link acquisition or digital PR program targeting high-intent Levels of Care pages. This is a deeper SEO investment than the standard monthly retainer covers, designed to remove the authority ceiling that content production alone cannot lift.

Recommended when authority — not content output or keyword strategy — is the confirmed bottleneck. Link acquisition and digital PR address a constraint that standard scope cannot resolve.

Sources used: Google Sheets NSM Tracker, Google Search Console, Multi-source, CallRail, QSSB
